

# Mace's Believe It or Not!

## BIZARRE TEXAS GROUNDWATER FACTS!

**Robert E. Mace**, Ph.D., P.G.

Texas Water Development Board

*presented to*

Milam & Burleson Counties Ground Water Summit

August 11, 2016

The following presentation is based upon professional research and analysis within the scope of the Texas Water Development Board's statutory responsibilities and priorities but, unless specifically noted, does not necessarily reflect official Board positions or decisions.

**Believe it or Not!**

**Waco used to be known  
as Geyser City!**

PLATE VII.

FLOWING WELLS AT WACO, TEXAS.

## GEYSER CITY

The discovery of abundant artesian  
water in 1884 has made this city  
a health resort.

**Bell's Well  
destroyed  
the school!**

In 1886, J. D. Bell drilled the first artesian well in Waco, and the surrounding land became known as Bell's Hill. Bell's Hill became a fast-growing neighborhood thanks to the influx of workers for local railroads like the Missouri, Kansas, and Texas (MKT) and the Cotton Belt Line. In 1889, the Sixth District School was built at Fifteenth Street and Burnett Avenue. The school was later renamed Bell's Hill Elementary. Nearly identical in design to Sanger Avenue Elementary, which was built around the same time, the school featured elements of the Ruskinian Gothic and Colonial Revival styles. This included contrasting rough-hewn stone with red bricks, parapets flanking a large arched entryway, and a prominent cupola covered in cedar shakes. Despite its obvious sturdy construction, the building eventually collapsed in 1923 due to instability caused by extracting artesian water from the nearby soil.

**Dr Pepper used to be  
called the Artesian Mfg  
and Bottling Co!**

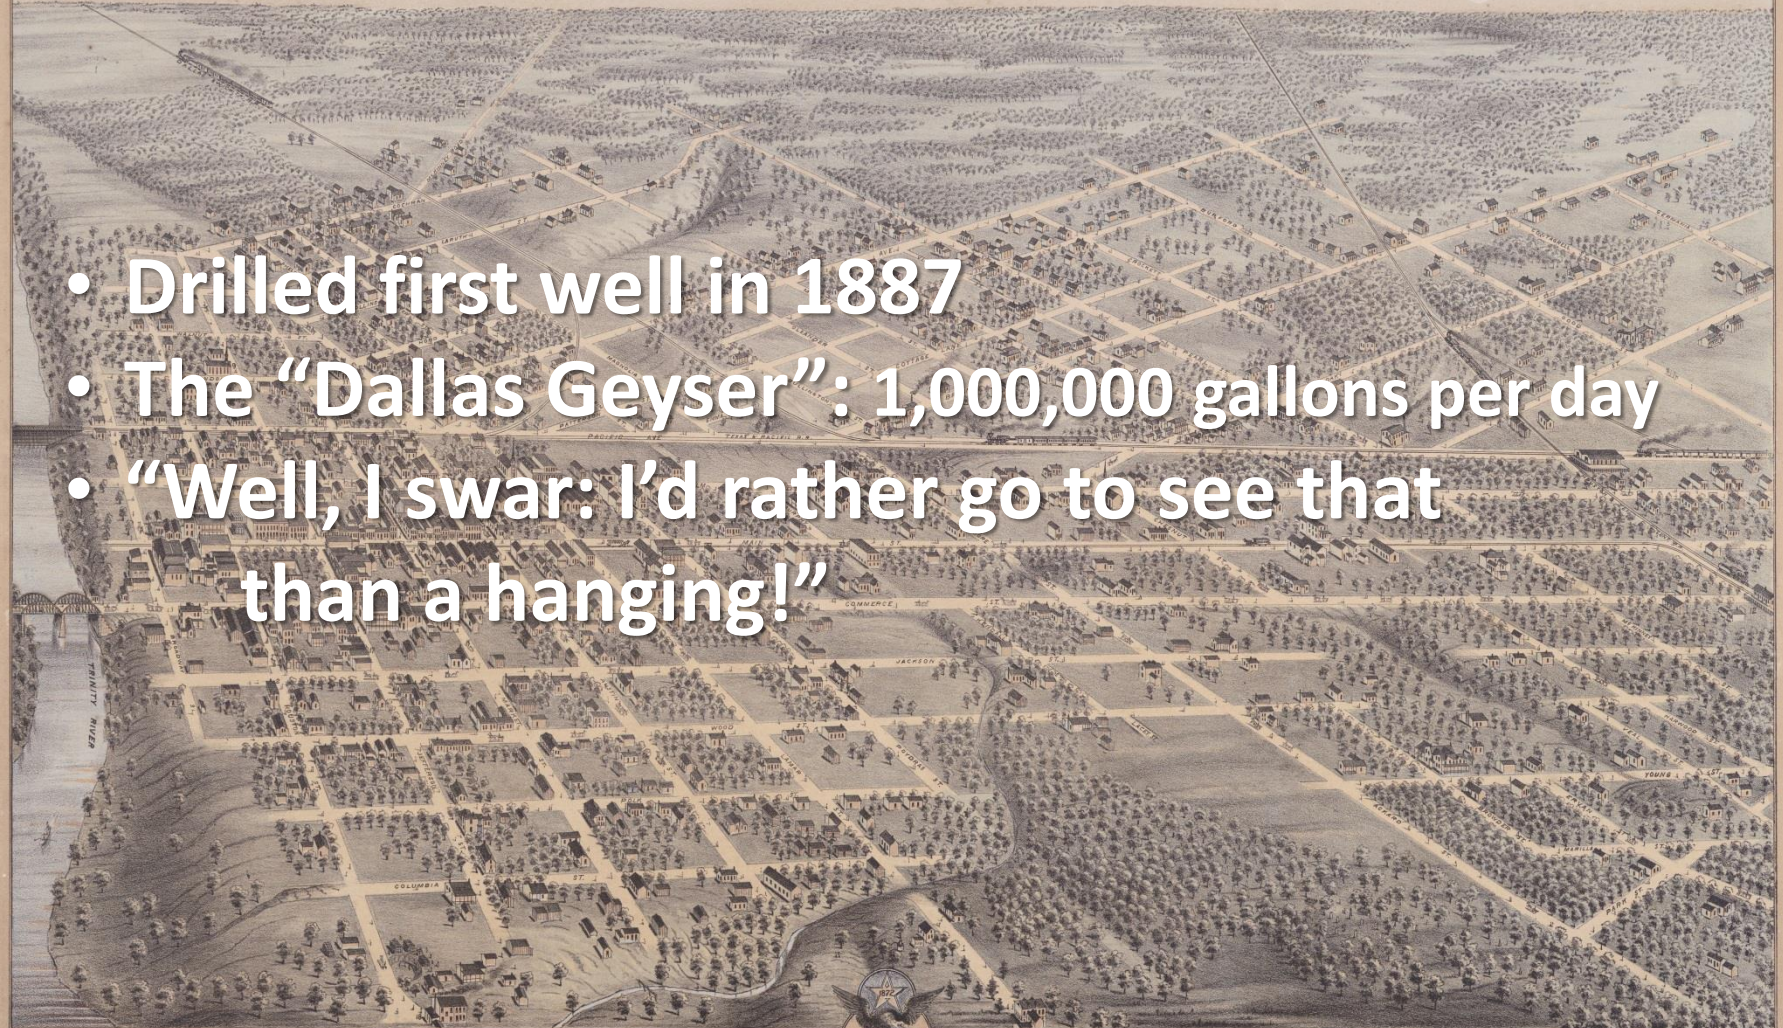

One of the first bottles  
used by the company

**Folks once proposed  
drilling 270 artesian  
wells to turn Dallas into  
a seaport town!**

# Dallas: 1887

- Drilled first well in 1887
- The “Dallas Geyser”: 1,000,000 gallons per day
- “Well, I swar: I’d rather go to see that than a hanging!”

170 feet below the top of the  
pumping the water from this c  
pressure, he held, was relieved o  
from the wells and would con  
produce a largely increased flow  
Mr. Mead maintained that it v

quire about 250-horse power to r  
water to the surface, and that co  
ly the wells were relieved of that  
of work and the energy transfer  
producing more water.

All of the wells connected with  
tunnel system are located within  
of 1,600 feet of the pumping sta-  
something over a mile of tunnels  
constructed at a depth of 172 feet u  
ground, to connect them with t  
shaft which is located near the el  
ing station. The tunnels are show  
cut of the map in dotted lines. I  
these wells were connected up to  
tion well by cast iron pipe laid a  
below the surface, which is show  
map in full black lines. It may  
that not all of the wells which h  
sunk by the city have been conn  
with the new system.

The tunnels are timbered up  
about five and a half feet in he  
three and a half feet in width. T  
are tapped at the depth of the t  
hole being cut in the well casing  
iron nozzle attached to them, w  
be closed off or opened as desir  
ball valve, which can be placed  
the well casing from the surface.  
ter flows from the wells into the  
and flows by gravity to the sh  
bottom of the shaft is closed off by  
masonry bulkhead about eight  
thickness. The bulkhead has an h  
hole through it which is closed  
heavy iron door. When this d  
place the water simply flows to t  
part of the shaft, but can not rise  
main shaft where the machinery s  
suction pipes pass through the b  
and admit the water from the lo  
tion of the shafts into the pun  
which the water is pumped throug  
mon discharge pipe into a 1,000,  
reservoir which has been construct  
surface. These pumps are locate  
bases of the shaft, 156 feet below  
face. The diameter of the shaft is  
feet and it is thirty feet across at  
where the pumps set. These pt  
each operated by two engines of  
power each, located at the sur  
manufactured especially for th  
They are vertical compound cond  
gines provided with steam jackets  
heaters, and are of a very econo

# TOOTHLESS BLINDCAT

**TOOTHLESS BLINDCAT.** The toothless blindcat is a troglobitic catfish of the family Ictaluridae. It was named *Trogloglanis pattersoni* by Eigenmann in 1919. It is considered to be the most highly specialized member of the family. It is unique in having no eyes, no pigment, no air bladder, and a sucker-type mouth. It is found only in southern Bexar County at depths of 1,350 to 2,000 feet below the surface, in the water-filled caverns of the Balcones Fault Zone Edwards Aquifer. It was discovered originally by [George W. Brackenridge](#) in one of his wells.

The DNA of  
these critters  
can be traced  
back to  
~Cretaceous
